# 1. General Information

This floodlight features an integral daylight sensing motion which will automatically switch the light on based on environment lux level and at a time set by the user.

Unit is for outdoor use only. Unit must be mounted as a fixed luminaire, and is not suitable for portable use.

## 2. Parts Included

- Low Energy Floodlight with photocell sensor.
- Instruction manual. Please keep safe for future reference.
- Accessory Pack including screws and wall plugs.
- 1pc. 20W low energy Compact Fluorescent Light. (For ECO1DD & ECO3DD)
- 2pcs 20W low energy Compact Fluorescent Light. (For ECO2DD)

## 3. Tools & Parts Needed

- 3 flexible core cable (1.0mm<sup>2</sup> or 1.5mm<sup>2</sup>).
- Electric/hand-held drill & bits.
- Terminal or Electricians screwdriver.
- Wire cutters.

Do not attempt to install during wet weather, if you are suffering from nausea or dizzy spells or on medication with similar side effects.

### **No User Serviceable Parts Inside**

## 4. Installation

### IMPORTANT

**Switch off the electricity at the fuse box by removing the relevant fuse or switching off the circuit breaker before proceeding with the installation (Diagram 2).**

After choosing a suitable location install the unit as follows:

The unit is suitable for connection to a 240 V ac 50Hz electricity supply. It is suggested that 3-core round flexible cable of 1mm<sup>2</sup> or 1.5mm<sup>2</sup> gauge is used. An internal switch should be installed to switch the power to the unit .

This allows the unit to be easily switched off when not required or for maintenance purposes.

This unit uses an integral wall fixing plate, detach the wall fixing plate by unscrewing and release but do not remove the fixing screw on the underside of the wall plate (Diagram 3).

Mark the position of the wall fixing holes (60mm). Ensure the wall plate is correctly positioned. Note the "UP" indent on the inside of the wall plate . Drill the holes, insert the wall plate into the holes.

**Pierce and pass the cable through the grommet before securing the wall plate to the wall.**

It is recommended that the grommet is pierced with a screwdriver to ensure a better seal. (Diagram 4).

Fix the wall plate to the wall with screws provided . Connect the cable to the terminal block on the unit as follows (Diagram 5):

<b>Neutral (Blue )</b>	<b>N</b>
<b>EARTH (Green/ Yellow)</b>	
<b>LIVE (Brown)</b>	<b>L'</b>

Ensure Connections are secure.

The unit is supplied with a hanging attachment (tether) to aid installation. Ensure the tether is securely fixed into the slot before releasing the weight of the unit. (Diagram 6)

To connect another unit of floodlight , connect the looping power cable to the terminal block on the master unit as follows ( Diagram 7 ):

<b>Neutral (Blue)</b>	<b>N</b>
<b>EARTH (Green/ Yellow)</b>	$\oplus$
<b>LIVE (Brown)</b>	<b>L'</b>

Fit the floodlight to the bracket by inserting the catch in the floodlight into the recess at the top of the wall plate and locating the floodlight securely over the wall plate. Fit and fully secure the locating screw (Diagram 3).

### **For ECO1DD & ECO2DD**

To fit the CFL, release but do not remove the screw on the front cover of the floodlight, open and rotate down but do not separate from the main floodlight body. (Diagram 8)

### **For ECO3DD**

To fit the bulb, turn the lamp enclosure 180 anti-clockwise to release from the bayonet lock. (Diagram 10)

Remove the bulbs from its packaging and fit into the lampholders. Ensure the bulb is fully secured into the lampholder and the support bracket is located around the bulb.

Close the front cover, ensure the screw is fully tighten.

This floodlight uses a universal joint, it can be directed to suit your installation by rotating the floodlight left to right and up or down. (Diagram 9)

## 5. Operation and Testing

### Setting Up For Automatic Operation

**The Sensor Head can be panned 90 degree to left and 90 degree to the right. (Diagram 10)**

The adjustment controls on the unit (Diagram 11) should be set as follows.

The TIME control determines how long the lamp remains illuminated after activation (1 hour to 12 hours).

These settings allow the lamp to illuminate for the designated time on period after darkness falls and the unit is activated.

**The DUSK (LUX) control** determines the level of darkness required for the unit to start operating. (Diagram 12)

The setting is best achieved by the procedure below:

**Set the DUSK control knob fully anti-clockwise** and the Time control to the required minutes. Wait until darkness falls.

When the ambient light level reaches the level of darkness at which you wish the lamp to become operative (ie. At dusk), SLOWLY rotate the control in a clockwise direction until a point is reached where the lamp illuminates. Leave the control set at this point.

At this position, the unit should become operative at approximately the same level of darkness each evening. Observe the operation of the unit. If the unit is starting to operate too early (ie. when it is quite light), adjust the control slightly anti-clockwise. If the unit starts to operate too late (ie. only when it is very dark), adjust the control slightly clockwise.

Continue to adjust until the unit operates as desired.

## 6. Technical Specifications

Power Supply

230V AC ~ 50Hz

Maximum External Load

No other external loads can be used.

	Number of Slave Unit		
<b>Master</b>	ECO1FL	ECO2FL	ECO3FL

Day & night or night only operation

Environmental Protection

IP45 (suitable for outdoor use)

## 6. Troubleshooting Guide

### Problem

Lamp stays OFF

### Solution

- Check that the power is switch ON at the wall switch.
- Ensure no connections are loose
- Ensure that CFL is seated correctly in the lamp holder.
- Check the CFL. If the CFL has failed, replace it.

If you experience problems refer to Troubleshooting Guide.  
If problems still exist, do not immediately return the unit to store.
